## #EXTINCT SPECIES

If birds are dinosaurs, why aren't they cold-blooded?

If dinosaurs were reptiles, then why aren't birds cold-blooded?

For more than 100 years, researchers assumed that because most modern reptiles are ectothermic, ancient reptiles must have been, too.

"So often, if you look at living animals and make an assumption about the ancestral state based on the current condition, it will lead you wrong," Jingmai O'Connor, associate curator of Fossil Reptiles at the Field Museum in Chicago, told Live Science.

Views started changing around the late 1960s, with the discovery of a bird-like specimen called "Deinonychus." Since then, researchers have found physical characteristics that indicate many dinosaurs, including ancient birds, were warm-blooded.

The answer is straightforward. Most dinosaurs were probably warm-blooded, too.

Birds are descended from a diverse group of two-legged dinosaurs called *theropods*, which included giant, meat-eating predators like "Tyrannosaurus rex" as well as the smaller 3-foot-long (1 meter) "Mononykus."

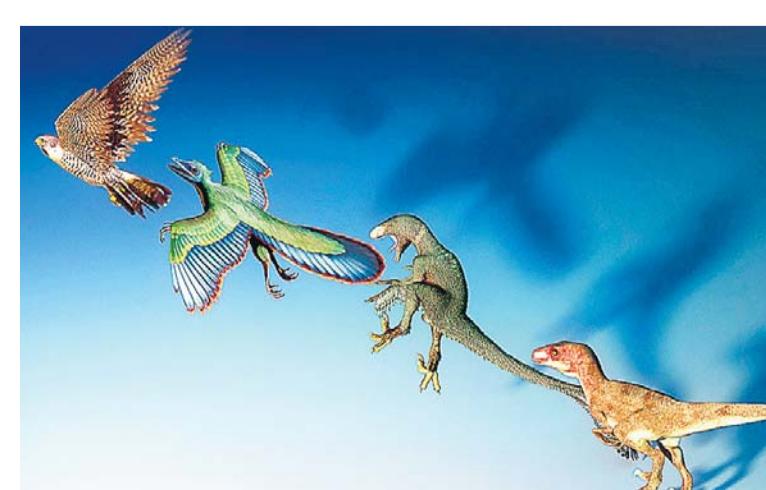

Like mammals, birds are warm-blooded, or *endothermic*, meaning they internally regulate their own body temperature. *Endothermic* animals have a higher metabolism, which permits more physically demanding activities like flying, but requires more calories to maintain.

"Animals, that are warm-blooded, are usually more active," Holly Woodward, a professor of Anatomy and Palaeontology at Oklahoma State University, told *Live Science*. "They can be active into the night. And so it's an evolutionary strategy in which you can be foraging for food when other animals can't, because they're too cold and slow."

Her observations have shown that dinosaurs' bone structures are more similar to birds' and mammals' than to crocodiles'.

Exactly when warm-bloodedness first popped up is unclear. All dinosaurs (including birds) and crocodiles share a common reptilian ancestor, and both Woodward and O'Connor said that there's good evidence that this ancestor was warm-blooded meaning *endothermy* arose prior to dinosaurs. Cold-blooded dinosaurs would have appeared later.

But it's possible that endothermy showed up even earlier. If both mammals and most reptiles are endothermic, perhaps the common ancestor, which lived about 310 million years ago, was also endothermic. "However, endothermy, most likely, evolved independently in mammals," O'Connor said.

# The Most Stupid Rules in Language

The English language prohibition against 'preposition stranding,' ending a sentence with a preposition like with, at, or of, is a fantastically 'stupid' rule that, when followed, often has the effect of mangling a sentence. And yet for hundreds of years, schoolchildren have been taught to create disastrously awkward sentences like "With whom did you go?" The origins of this rule date back to one guy you may have heard of. Of whom you may have heard. Whatever. His name was John Dryden.

• Dan Nosowitz

There are thousands of individual rules for proper grammatical use of any given language. Mostly, these are created, and then taught, in order to maximize understanding and minimize confusion.

He was England's first official poet laureate. He wrote dozens of plays, poems, and works of satire, literary prose, and criticism. The best modern edition of the collected works of John Dryden took the University of California Press about 50 years to create, and runs to 20 gigantic volumes.

He invented the heroic couplet. He was the most important translator of classics into English for hundreds of years, possibly ever. He was, without a doubt, *the guy* in the London literary scene of the late 17th century, and that was a very important scene.

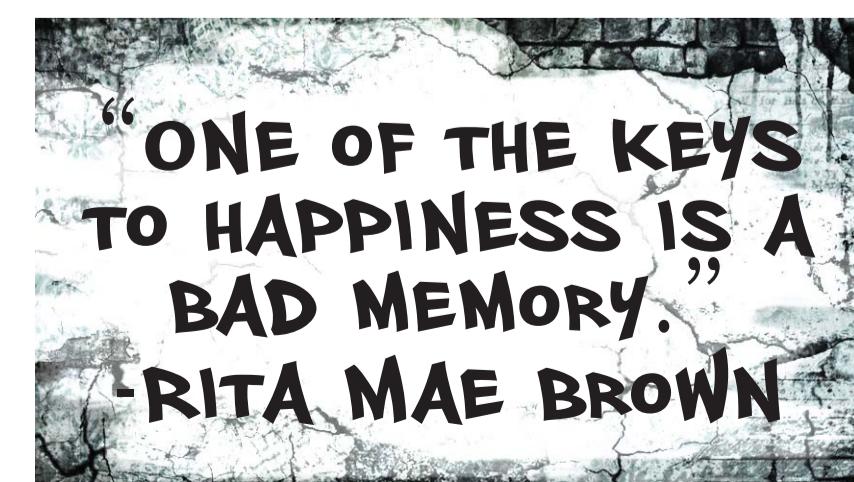

"I imagine them kind of pick-up sticks. If you're growing really slowly, those fibers tend to orient themselves parallel to each other, and so they become flat," Woodward said. "But if you're growing faster, the fibers are just sort of a jumble," which is the type of structure she tends to see in warm-blooded bones.

Her observations have shown that dinosaurs' bone structures are more similar to birds' and mammals' than to crocodiles'.

## Lightning Safety Awareness Week

**L**ightning Safety Awareness Week, celebrated in June, sparks crucial conversations about a powerful natural phenomenon. This week is vital because lightning strikes can be deadly, causing significant injuries and fatalities each year. Despite its potential dangers, lightning often doesn't receive the attention it deserves compared to other weather-related threats. The purpose of Lightning Safety Awareness Week is to educate the public on the dangers posed by lightning. It also promotes safety measures that can reduce the number of injuries and fatalities.

## Weird Place

**F**ollowing the death of Oliver Cromwell, England was in a pretty weird place, and the English language was in a weirder one. The monarchy had been restored, but during Cromwell's reign, an awful lot of English writing had been stunted, and for some time, plays were even banned, for fear of political criticism.

That's a bigger deal than it sounds, because during the latter half of the 17th century, literacy rates in London, by far the highest in the country, were only around 20 per cent. The language evolved on the stage, and that development was paused for a few decades.

At the time, there was at most a handful of what are called English grammars, basically books instructing the proper way to use the English language. In the Restoration period, when Dryden was a star, the discussion of exactly what the English language was (and, in turn, who the English people were, and what England was) began to really rapidly evolve.

Dryden is not very well-known today, but at the time, he was the leading literary rock-star, and his words carried a huge amount of weight. He wasn't really one of the leading

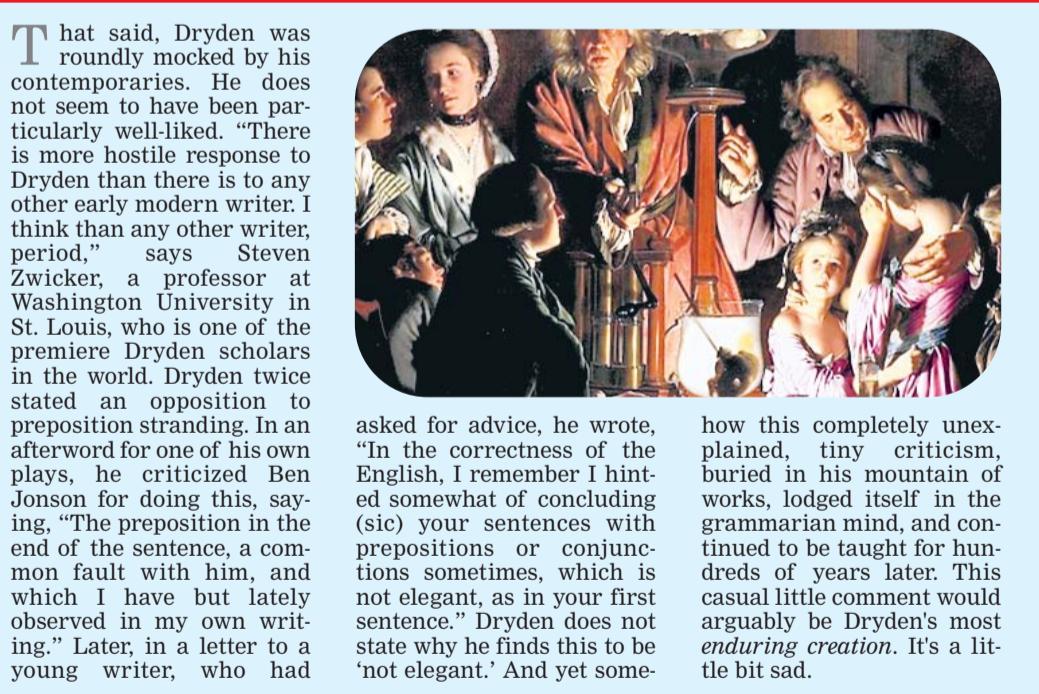

John Dryden.

## Hostile Response

Asked for advice, he wrote, "In the correctness of the English, I remember I hinted somewhat of concluding (sic) your sentences with prepositions or conjunctions sometimes, which is not elegant, as in your first sentence." Dryden does not state why he finds this to be "not elegant." And yet some-

## Love for Classics

**D**ryden loved the classics. He was easily the most prominent translator and critic of Ovid, Horace, and Virgil, although his translations (like a lot of his own writing) were sort of bombastic and larger-than-life.

He was fluent in Latin and worshipped the classics. And English was in a place where it was about to accelerate, it had been paused and now it was unpause.

Dryden's ideas about "what English should be" were heavily motivated by Latin and Latinate ideas.

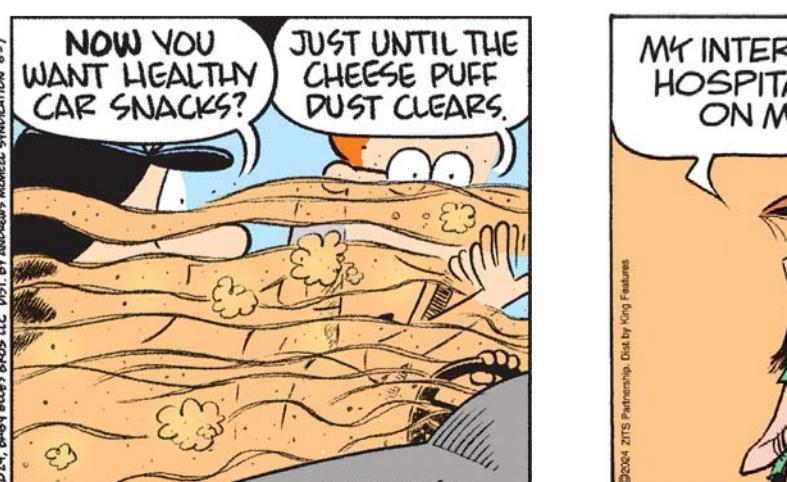

It's believed that this is where his preposition thing comes from. From the Latin preposition *ante*, that come about at a time and place when English grammar was rapidly taking form, and it came from the mouth of the biggest literary figure of the time. But like Dryden himself, it's a hard rule to get a hold of. Of which gets a hold.

It may be in your best interest to trade five minutes of scrolling in favour of one of the five science-backed, health-boosting activities listed below.

## Focus On Your Breath

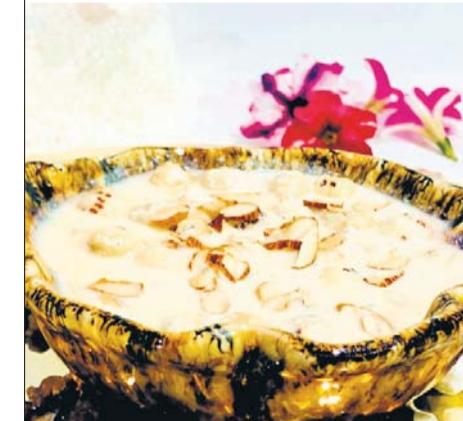

**W**ant to reduce stress and boost your physical and mental health almost immediately? Take a *breathing* break. Simply pause and spend a few minutes, taking long, deep breaths in and out of your nose. Better yet, it doesn't even require a full five minutes to begin reaping the wellness benefits.

## Move Your Body

**B**eing sedentary, specifically prolonged sitting, is not only detrimental to your physical health but also to your mental well-being. According to research, consistently working on breathing better can also improve posture and decrease pain.

## Prep Healthy Snacks

**H**ave you ever been watching TV and wanted a snack but didn't want to take the time to wash the fresh fruit in your fridge, so you grabbed a bag of chips instead? I know I have. Accessibility is a significant factor in our ability to make healthy choices, so taking five minutes of scrolling in favour of one of the five science-backed, health-boosting activities listed below.

## Take A Quick Stroll

**R**esearch has shown that 10,000 steps a day can reduce your risk of cancer, heart disease and early death, but newer research has found that any amount of walking helps. So just one *five-minute walk* around your neighbourhood or inside your office building has health-boost-

ing benefits. Taking it a step further (pun intended), walking for five minutes every 30 minutes produces an immediate measurable reduction in both blood pressure and blood sugar, according to a recent study.

Unlike lofty resolutions for better health, such as giving up

touting the benefits of weekly meal prep, where you make all the meals for your week on one day. Although that sounds great in theory and is convenient throughout the week, it can be logistically demanding and time-consuming. Spending only five minutes every other day or so to wash and cut up some of your favourite fresh fruits and vegetables can be less intimidating and serves as a good entry point to larger-scale meal prep.

You've likely heard nutritionists and fitness influencers alike tout the benefits of weekly meal prep, where you make all the meals for your week on one day. ## Connect With A Friend

**T**ake five minutes to *feel seen and heard* each day and return the favour for someone else. If you can't meet up with a friend or loved one in person, screen time can actually work in your favour by enabling video chatting. It's always better to talk in person, but socializing in any way that helps you feel supported can ward off loneliness and feelings of isolation, which are associated with declining cognitive skills, depression, heart attack, stroke and early death. If scheduling makes it difficult to connect with friends daily, make a point to strike up conversations with others as you run errands.

cheese or chocolate forever, the five-minute activities listed above are more practical. With consistent practice, they can become sustainable healthy habits that will deliver wellness-boosting benefits over your lifetime, a potentially longer lifetime because of those five-minute habits!
